To support our international projects, we are looking for a

Project Engineer

A trainee function with great possibilities to grow

Function:

Gemco realizes foundry projects worldwide for clients in the automotive, railway, mining, windmill and many other industries.

Examples of projects are the design and realization of a complete new foundry, an international relocation of a foundry plant or restructure and modernization of an existing foundry.

Our project teams are multidisciplinary and vary in size up to 10 colleagues.

Our Project Managers are in charge of their project teams and responsible for the realization of the project. Project teams consist of project engineers, design engineers and experienced foundry technologists.

During your period as a trainee, Gemco will give you a dedicated training and coaching on the job; (external) course(s) in foundry technology and project management and you will be trained and coached to design a foundry in 2D and 3D. You monitor and take care of the total set of drawings of a project and you will supervise the interfaces between the different groups of machineries. This way you will quickly learn many of the different (technical) aspects of our projects.

During and after your trainee period you will practice some tasks and corresponding responsibilities in the role of a Project Engineer: develop technical specifications, make commercial proposals, prospect and selection of suppliers, purchasing activities, management responsibility for a part(s) within the project. In this period of your career you will travel frequently, to suppliers and to the project site.

In time you can choose your career path, depending on your experience and preferences: engineering, project management, site management or sales.

Profile:

- Technical mechanical education, MSc
- Willing to learn different fields of technology

- Good knowledge of Dutch and English (verbal and written) and preferably German and/or other languages.
- You show initiative, are energetic and you have a client-oriented attitude.
- You are creative, are able to handle a lot of details, you are quality oriented and persistent.
- You are willing to travel and stay abroad (also for a longer period of time)
- You are flexible and easily adjust to different circumstances and different cultures
- You are a strong and straightforward team player and dare to take responsibility.

Offer

- A dynamic function within an enthusiastic and result driven team
- Lots of possibilities for individual growth and development (coaching and training on the job) within a growing and innovative organization
- High degree of independence and responsibility
- Informal working atmosphere
- Salary and secondary benefits in accordance with age, education and experience

Information

For information about this position and our company you can contact Daan van Heereveld, Manager Operations, or Monique Westendorp, HR-Manager. Phone 040-2.643.607.
